Fill Foreman – Gulf Coast, TX

A Fill Foreman is responsible for supervising and overseeing the crew working at the landside fill location and refers to the written plans and specifications of the site making certain that the work is in compliance with contract specifications. He/she supervises the activities of the Bulldozer and Wheel Loader Operators engaged in the process of setting and moving pipe; moving earth, sand, gravel, clay, or mud; grading material being transported to the fill site to create fill for beaches, disposal islands and land being reclaimed; Flagman setting up fences or tape to isolate the construction area to insure the safety of the workers and local visitors to the beach area; and Shoremen walking the line to detect leaks and conduct minor repairs. Occasionally, the Fill Foreman will operate a Bulldozer or Wheel Loader if necessary, and if trained to do so. He/she oversees the maintenance of the site and equipment; issues requisitions for equipment and supplies; conducts periodic safety meetings; checks dykes and grade stakes to make sure the grade meets specification. The Fill Foreman will occasionally walk through the fill area to determine the texture and type of fill that is being piped ashore. He/she must be careful of his/her footing since wet sand and mud could act like “quick sand” when fluid, especially near the pipeline outfall area. When operating the Bulldozer or Wheel Loader, he/she may encounter jolting, bouncing and jerking, as well as spray and splashing from the body of water. May lift, carry, pull or push parts and equipment generally weighing up to 50 lbs. Periodically, the employee will be required to spend 2-3 days watching safety training videos prudent to their job duties. Other duties may be assigned.

This position is located in the Gulf Coast, TX and is a 3-4 month project beginning in mid-September.
